

NEW
MODELS
Series **FLAT FACE**

► Flat-face quick-release couplings

FASTER[®]
think faster

UNI EN ISO 9001
Cert. n° 2905
ISO/TS 16949

► FLAT-FACE QUICK-RELEASE COUPLINGS

► Features

- Flat-face shut-off valves: easy to clean.
- No spillage during connection and disconnection.
- Rolled surfaces in sealing area to ensure the lowest roughness.
- Internal components purposely designed to reduce turbulences and consequent pressure drop.
- PTFE back-up ring: great resistance to pressure peaks.
- Springs exposed to atmosphere made of stainless steel.
- Quick-release couplings according to Faster profile or interchangeable to ISO 16028 and HTMA standards.
- Wide range of threads and connectors (BSP, NPT, metrics, SAE,...).
- On request FPQ Faster Premier Quality surface treatment (standard on 3FFV couplings).
- Accessories and spare parts kit available with detailed assembling instructions.

MALE COUPLINGS

- Balls racing area induction hardened.
- Polyurethane seal with special profile and easily replaceable.
- Wide range of models: single valve version (FF), double valve versions (2FF) for pressure containing and versions for connection under pressure 3FFI.
- Automatic slider made of steel to protect connection threads (3FFV).

FEMALE COUPLINGS

- Easy maintenance by seals replacement.
- Patented single body valve in female part: great resistance to vibrations.
- Polyurethane seal with special profile and chamfered washer.
- Valve locking by semiguides in sintered steel (Faster patent) with great flow section.
- Carbonitrided sleeve.
- Great number of latching balls.
- Safety sleeve with double ball to prevent accidental disconnection.
- Push-pull female couplings FPI series suitable for rigid tube.
- Push-pull female couplings 5FPI series suitable for rigid tube, connectable under working pressure.
- Versions available for connection under working pressure (3FFI series) and with latching sectors (2FSI series) suitable for pulsing pressure applications.
- Additional safety sleeve with double function: against accidental disconnection and to signal that connection is fully achieved (3FFV).

Series **FLAT FACE**

► Benefits

- Quick-release couplings according to Faster profile or interchangeable to ISO 16028 and HTMA standards.
- Easy connection: "Push" system.
- Mating surfaces are perfectly flat: easy to clean.
- Neither oil spillage nor air inclusions during connection.
- Very compact.
- Polyurethane seals are very resistant to wear due to dirt and dust inclusions.
- Easy maintenance and seals replacement.
- Connection allowed even at residual pressure (roughly up to 4 MPa) without seal damages (FFN, FFI series).
- Easy seals replacement both in male and in female coupling.
- Wide range of threaded adaptors (BSP, NPT, metrics, SAE) for every connection need.
- Automatic protection slider on male part prevents accidental damages to connection threads (3FFV series).
- FPQ (Faster Premier Quality) surface treatment to stand corrosion gives a higher protection than standard zinc plating with Cr III passivation. Treatment available on request; standard on 3FFV series.

► Applications

FASTER® flat-face couplings are studied for all those applications where, for safety reasons or environment care, it is absolutely necessary not to leak oil during connection and disconnection, and where couplings have to be used in dirty and dusty atmosphere. For instance next to high voltage cables, to connect hydraulic tools on aerial platforms, in mines, building sites, dockyards, railway yards, etc... In addition to that, 3FFV couplings are connectable under full working pressure and are particularly suitable for pulsing pressure applications and when vibrations or hoses torsion may occur.

► Guarantee

- All FASTER® quick-release couplings are designed and produced in conformity with the regulations of Quality Managing System according to UNI EN ISO 9001 and UNI ISO/TS 16949 Standards.
- They bear the FASTER® logo to guarantee their origin and reliability.
- FASTER® quick-release couplings are distributed worldwide through a network of highly qualified distributors.
- If a FASTER® quick-release coupling is connected to a correspondent competitor's type please check the functionality, the sealing and the resistance to working pressure before using the coupling.
- Faster can not assure the performance, quality and connecting tolerances of competitor's types.
- Malfunctioning or leakages due to the above mentioned cases could cause serious damages to persons and machines.

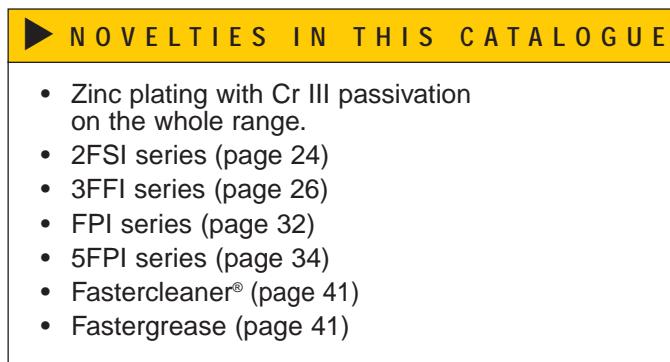

UNI EN ISO 9001
Cert. n° 2905
ISO/TS 16949

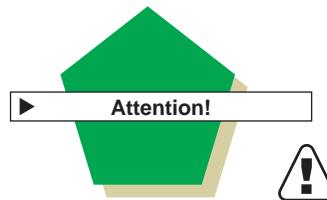

► Recommendations

- Improper use and incorrect maintenance of products with high internal working pressures could cause malfunctioning and damage to persons and machines.**
- Therefore it is necessary to carefully conform to the simple instructions included in this catalogue. **For any further information please contact FASTER Research & Development Dept.**
- Before using a new quick-release coupling, please carefully check all data reported in our catalogues.
- Make sure that the coupling is suitable for pressure and flow characteristics requested by the applications.
- Lubricate the seals and perform a connect and disconnect operation in order to check the perfect functioning of the coupling.
- Verify that threads fit and the correctness of their sealing.
- If necessary replace damaged components with **FASTER® original spare parts.**
- Before any connection and disconnection carefully clean both male and female parts to prevent dirt inclusions into the circuit and consequent seal damage.**

NEW

- Zinc plating with Cr III passivation on the whole range.
- 2FSI series (page 24)
- 3FFI series (page 26)
- FPI series (page 32)
- 5FPI series (page 34)
- Fastercleaner® (page 41)
- Fastergrease (page 41)

► Attention!

- During the first applications of the coupling, be sure that no one is in the nearby and test the coupling under the maximum working pressure when connected and disconnected.
- The most critical moment in flat-face couplings takes place during the coupling phase when the valve in the male part moves and causes an internal volume reduction.
- This fact causes a pressure increase due to the oil quantity existing in the plant.
- Furthermore, during that operation, the sealing action of the seal in male part has to shift from the male valve to the female.
- In order to resist to internal stresses, FASTER has designed the male couplings of 2FF... series, equipped with a **patented double valve**: no more troubles due to seal extrusion without rigid PTFE covered seals, very sensitive to dirt inclusions.
- Thanks to the patented Faster technology the new quick-release coupling 3FFI series male and female part can be connected under 25 MPa pressure with standard female and male parts respectively 2FFI and FFI series.
- If the connection phase is carried out at residual pressure, the required force could be higher than the human one, therefore it is necessary to reduce the internal pressure of the coupling.
- Dirt on male or female part during coupling operations can cause seals damage.
- In order to ensure long service life of seals it is recommended to carefully clean mating parts, easily and quickly done thanks to coupling design.
- In case of seals damage it is necessary to replace them by **FASTER® original spare parts.**
- The 3FFV series quick-release couplings can be connected under full working pressure. The necessary force to connect is proportional to the internal pressure and in case it is very high is possible to use standard tools thanks to the special shape of the sleeve.
- When disconnected, use suitable **FASTER® covers** to protect couplings from dirt.
- In case of jamming problems due to dirt inclusion, the new **FASTERCLEANER®** purposely studied by Faster, is the ideal product to loosen, lubricate and protect the quick-release coupling (page 41).
- FASTERGREASE** is the ideal product to lubricate and grease moving parts (page 41).

► Responsibilities

- The recommendations stated in this catalogue do not consider all risk factors in every possible application of **FASTER®** couplings.
- The final choice of the product is under customer's responsibility who has to make the selection according to **FASTER®** suggestions.
- The customer has to make sure that all requirements of chosen parts are respected, efficiency is maintained and the end user is informed about use and maintenance operations.
- FASTER®** and its Distributors are not responsible for damages to persons and machines caused by an improper use and an incorrect maintenance of products.
- Increase of products' technical and functional features is **FASTER®**'s policy. For that reason all data in this catalogue are not binding. **FASTER®** is entitled to modify the specifications without prior notice.

See available item codes in the ordering chart.

As a further help in defining and selecting the most suitable product for specific application please ask and fill-in with as much information as possible the Product Definition Form (mod. A003) sending it back to **Faster Customer Service**. Product definition form can be directly downloaded from the website www.faster.it in the product section.

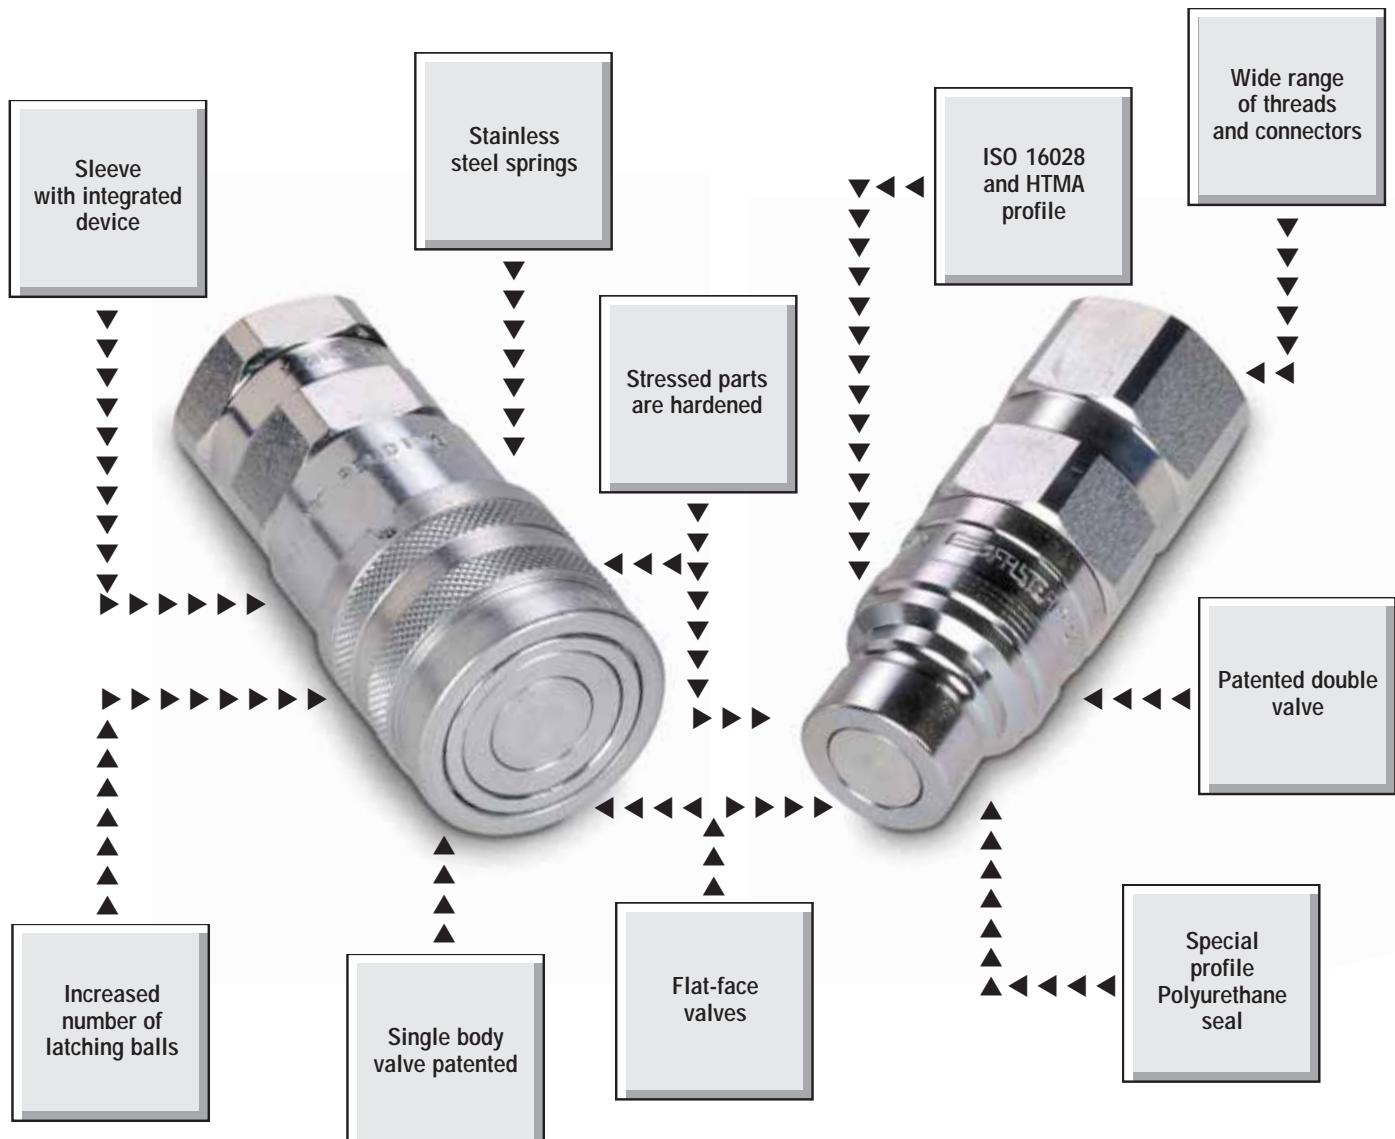

Series **F 2 F**

Flat-face quick-release couplings FF, 2FF series

In the picture

Series **2F**

► THE NEW REVOLUTIONARY WAY OF THE QUICK-RELEASE COUPLING

- 1) No spillage during connection and disconnection.
- 2) FASTER® technology patented.
- 3) No extrusion troubles thanks to special profile Polyurethane seals.
- 4) Easy to clean thanks to flat mating surfaces.
- 5) Seals replacement is very easy.
- 6) 2FFI and 2FFN38 series couplings interchangeable according to ISO 16028 and HTMA standards.

► FEATURES

- **Connection system:** pushing the male coupling
 - **Disconnection system:** pulling back the sleeve
 - **Shut-off system:** flat valve (male coupling with double valve)
 - **Connectability:** without pressure
 - **Disconnection under pressure:** not allowed
 - **Interchangeability:** according to ISO 16028 and HTMA standard
 - Balls-bearing latching system
 - Male couplings with double valve
 - Available versions made of AISI 316 stainless steel
(see page 20)
 - Available versions with Faster Premier Quality (FPQ)
surface treatment (see page 40)

► Technical data

(▲)

*Safety factor = 1:4 - for static pressure safety factor 1:2

(▲) with 2FFN38 male couplings equivalent size

Pressure drop graph: test bench to ISO 7241-2 specifications with ISO VG32 oil temperature at 40°C (104°F).

100 VG32

- Female in steel with carbonitrided wear parts.
 - Male in high grade carbon steel, induction hardened.
 - Valves in steel.
 - Surface treatment: zinc plating and Cr III passivation.
 - Springs in AISI and C98 steel.
 - High resistance balls 100 C6

- High resistance balls 100 Co.

Seals:
Standard in oilproof NBR (Nitrile Rubber) and Polyurethane.
On request: Viton, Neoprene, EPDM or other seals.

On request: Viton, Neoprene
Antioxtrusion rings:

Antlextrusion
In pure PTFE

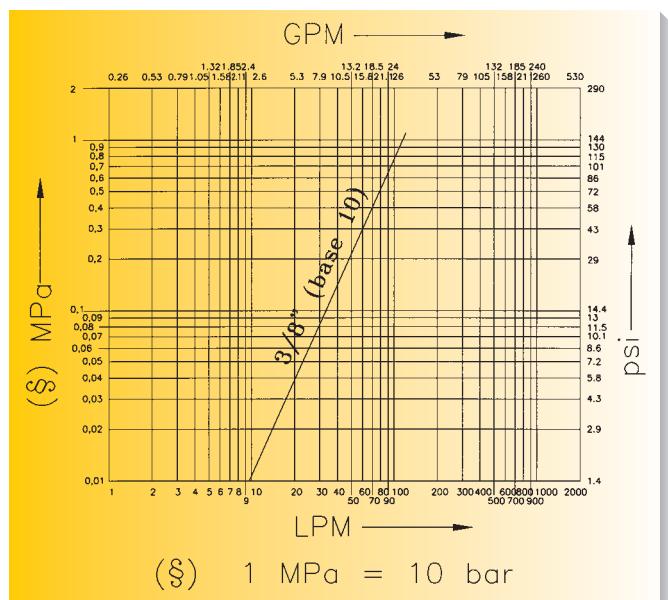

In pure PTFE.
Working temperatures:

Working temperatures: with standard seals from -25°C (-13°F) to +100°C (+212°F). For different temperature, the quick-release coupling will be supplied with the appropriate seals.

♦ ISO size GAS = BSP *On request

The description and illustrations in this catalogue are for information only and are not binding.

► FEATURES

- **Connection system:** pushing the male coupling
 - **Disconnection system:** pulling back the sleeve
 - **Shut-off system:** flat valve (male coupling with double valve)
 - **Connectability:** without pressure
 - **Disconnection under pressure:** not allowed
 - **Interchangeability:** according to Faster internal standard
(3/8" size according to ISO 16028
and HTMA standard)
 - Balls-bearing latching system
 - Male couplings with double valve

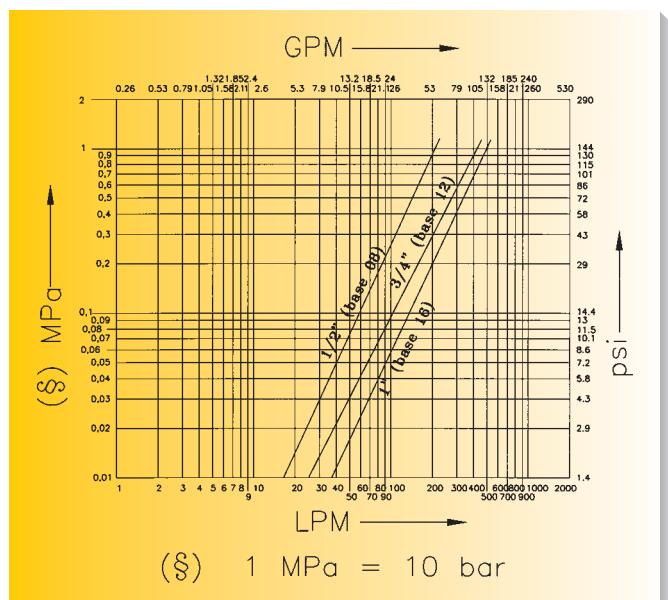

Patent
Application
Pending

► Technical data (▲)

*Safety factor = 1:4 - for static pressure safety factor 1:2

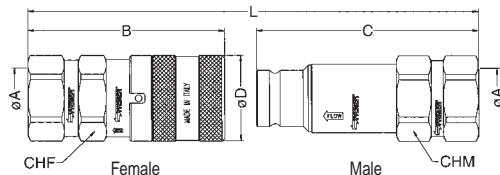

(▲) with 2FFN male couplings equivalent size

The descriptions and illustrations in this catalogue are for information only and are not binding.

► FEATURES

- **Connection system:** pushing the male coupling
- **Disconnection system:** pulling back the sleeve
- **Shut-off system:** flat valve (male coupling with double valve)
- **Connectability:** without pressure
- **Disconnection under pressure:** not allowed
- **Interchangeability:** according to Faster internal standard
- Balls-bearing latching system
- Male couplings with double valve

Patent
Application
Pending

► Technical data

Size ♦	DN Nominal diameter		Rated flow		Force to connect		Max. work. pressure *		Minimum burst pressure				Fluid spillage			
	mm	inc.	l/min	GPM	N	lb	MPa	PSI	Connected	Male	Female	MPa	PSI	cc max.		
3/4"	12	16	0,63	150	39,7	240	52,9	25	3625	120	17400	120	17400	100	14500	0,02

*Safety factor = 1:4 - for static pressure safety factor 1:2

Pressure drop graph: test bench to ISO 7241-2 specifications with ISO VG 32 oil temperature at 40°C (104°F).

Materials:

- Female in steel with carbonitrited wear parts.
- Male in high grade carbon steel, induction hardened.
- Valves in steel.
- Surface treatment: zinc plating and Cr III passivation.
- Springs in AISI and C98 steel.
- High resistance balls 100 C6.

Seals:

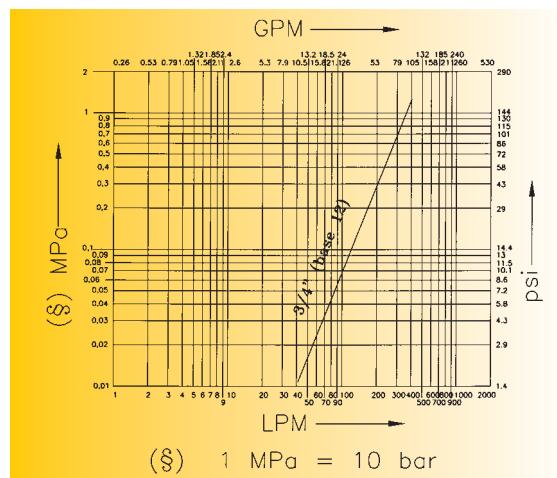

Standards in oilproof NBR (Nitrile Rubber) and Polyurethane.
On request: Viton, Neoprene, EPDM or other seals.

Antiextrusion rings:

In pure PTFE.

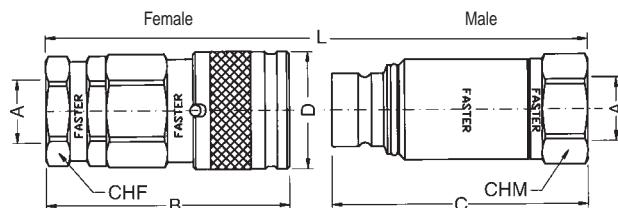

Working temperatures:

with standard seals from -25°C (-13°F) to +100°C (+212°F).
For different temperature, the quick-release coupling will be supplied with the appropriate seals.

► FEATURES

- **Connection system:** pushing the male coupling
- **Disconnection system:** pulling back the sleeve
- **Shut-off system:** flat valve (male coupling with double valve)
- **Connectability:** without pressure
- **Disconnection under pressure:** not allowed
- **Interchangeability:** according to ISO 16028 and HTMA standards (except for 1-1/2", 2" and 3" size)

- Balls-bearing latching system
- Male couplings with double valve

Series **FN** 38 **F**

Patent
Application
Pending

► FEATURES

- **Connection system:** pushing the male coupling
- **Disconnection system:** pulling back the sleeve
- **Shut-off system:** flat valve (male coupling with single valve)
- **Connectability:** without pressure
- **Disconnection under pressure:** not allowed
- **Interchangeability:** according to ISO 16028 and HTMA standard (except for 1-1/2", 2" and 3" size)

• Male couplings with single valve

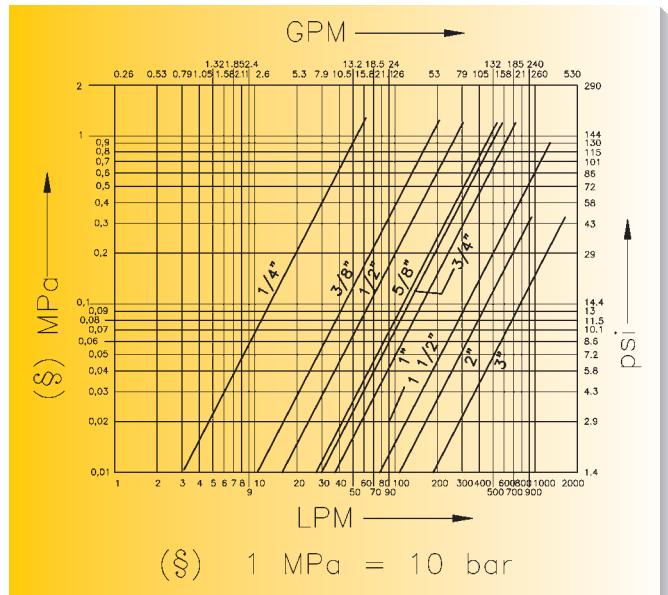

- Compact dimensions
- Competitive price
- High flow rate
- 3/8" size interchangeable with 2FFN38 female couplings

*Safety factor = 1:4 - for static pressure safety factor 1:2

(▲) With 2FFN38 female couplings equivalent size (see page 6), With 2FFI couplings equivalent size (see page 12), or with 2FSI couplings equivalent size (see page 24)

Pressure drop graph: test bench to ISO 7241-2 specifications with ISO VG 32 oil temperature at 40°C (104°F)

Materials:

- Female in steel with carbonitrided wear parts.
- Male in high grade carbon steel, induction hardened.
- Valves in steel.
- Surface treatment: zinc plating and Cr III passivation.
- Springs in AISI and C98 steel.
- High resistance balls 100 C6.

Seals:

Standard in oilproof NBR (Nitrile Rubber) and Polyurethane. On request: Viton, Neoprene, EPDM or other seals.

AntieXtrusion rings:

In pure PTFE.

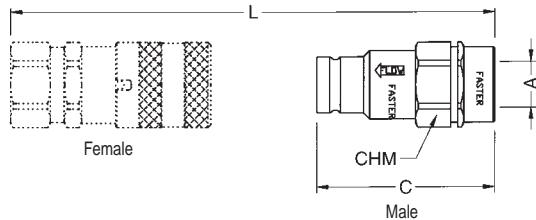

Working temperatures:

with standard seals from -25°C (-13°F) to +100°C (+212°F). For different temperature, the quick-release coupling will be supplied with the appropriate seals.

The descriptions and illustrations in this catalogue are for information only and are not binding.

Series

2F
STAINLESS
STEEL

► FEATURES

- **Connection system:** pushing the male coupling
- **Disconnection system:** pulling back the sleeve
- **Shut-off system:** flat valve (male coupling with single valve)
- **Connectability:** without pressure
- **Disconnection under pressure:** not allowed
- **Interchangeability:** according to ISO 16028 and HTMA standard

- **Made of AISI 316 stainless steel**
- **Balls-bearing latching system**
- **Suitable for aggressive environments and corrosive fluids**

Patent
Application
Pending

*Safety factor = 1:4 - for static pressure safety factor 1:2

Pressure drop graph: test bench to ISO 7241-2 specifications with ISO VG 32 oil at 40°C (104°F) temperature.

Materials:

- Female in AISI 316 stainless steel.
- Male in AISI 316 stainless steel.
- Valves in AISI 316 stainless steel.
- Springs in AISI 304 stainless steel.
- Balls in AISI 316 stainless steel.

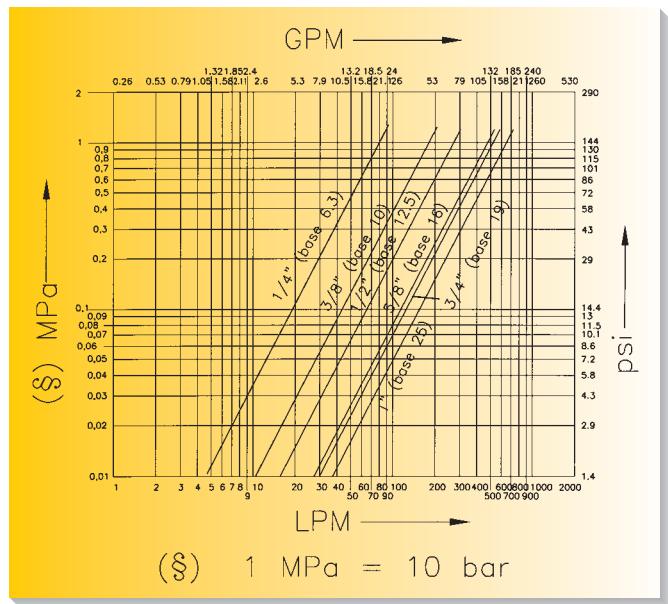

Seals:

Standard in oilproof NBR (Nitrile Rubber) and Polyurethane.

On request: Viton, Neoprene, EPDM, Kalrez, other.

Working temperatures: from -25°C (-13°F) to +100°C (+212°F).

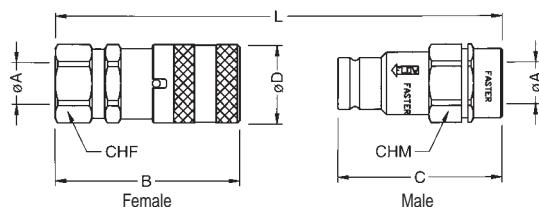

For different temperature, the quick-release coupling will be supplied with the appropriate seals.

The descriptions and illustrations in this catalogue are for information only and not binding.

► FEATURES

- **Connection system:** pushing the male coupling
- **Disconnection system:** pulling back the sleeve
- **Shut-off system:** flat valve
- **Connectability:** without pressure
- **Disconnection under pressure:** not allowed
- **Interchangeability:** according to ISO 16028 standard (except for 1-1/2", 2" and 3" size)

- Quick-release couplings female part

- Female/male latching by steel sectors instead of latching balls
- Unique shape of latching sectors allows the best load sharing
- Purposefully designed for pulsing pressure applications
- This solution prevents brinelling effect on connected male coupling

Series **25**

*Safety factor = 1:4 - for static pressure safety factor 1:2

(▲) With FFI male couplings equivalent size (see page 16)

Pressure drop graph: test bench to ISO 7241-2 specifications with ISO VG 32 oil temperature at 40°C (104°F).

Materials:

- Female in steel with carbonitrited wear parts.
- Valves in steel.
- Surface treatment: zinc plating and Cr III passivation.
- Springs in AISI and C98 steel.
- Latching sectors in steel.

Seals:

Standard in oilproof NBR (Nitrile Rubber) and Polyurethane. On request: Viton, Neoprene, EPDM or other seals.

Antextrusion rings:

In pure PTFE.

Working temperatures: with standard seals

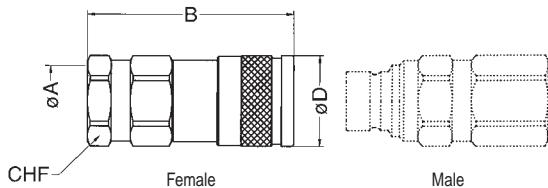

from -25°C (-13°F) to +100°C (+212°F).

For different temperature the quick-release coupling will be supplied with the appropriate seals.

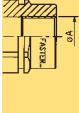

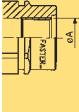

The descriptions and illustrations in this catalogue are for information only and not binding.

3FFI series flat-face couplings connectable under pressure

Patent
Application
Pending

In the picture

Series **3F_{I...M}**

In the picture

Series **3F_{I...F}**

► THE NEW REVOLUTIONARY WAY OF THE QUICK-RELEASE COUPLING

- 1) Male coupling 3FFI...M series, connectable up to maximum working pressure with standard female couplings 2FFI or 2FSI series free to drain.
- 2) Female coupling 3FFI...F series, connectable up to maximum working pressure with standard male couplings FFI, 2FFI series or 2FSI series free to drain.
- 3) Interchangeable according to ISO 16028 standards.
- 4) Wide range of threads.

► FEATURES

- **Connection system:** pushing the male coupling
- **Disconnection system:** pulling back the sleeve
- **Shut-off system:** flat valve (coupling with triple valve)
- **Connectability:** male part under pressure, female part free to drain
- **Disconnection under pressure:** not allowed
- **Interchangeability:** according to ISO 16028 and HTMA standards
- Male couplings with triple valve patented
- Connection up to maximum working pressure is achievable with minimal effort with standard female couplings 2FFI

*Safety factor = 1:4 - for static pressure safety factor 1:2

(▲) With 2FFI female couplings equivalent sizes (see at page 12)

Pressure drop graph: test bench to ISO 7241-2 specifications with ISO VG 32 oil at 40°C (104°F) temperature.

Materials:

- High grade carbon steel, induction hardened.
- Valves in steel.
- Surface treatment: zinc plating and Cr III passivation.
- Springs in C98 steel.

Seals:

Standard in oilproof NBR (Nitrile Rubber) and Polyurethane.

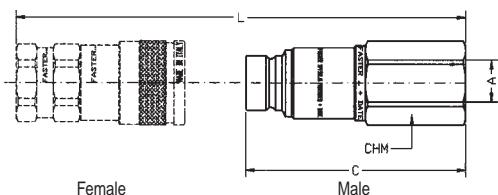

Working temperatures:

from -25°C (-13°F) to + 100°C (+212°F).

For different temperature, the quick-release coupling will be supplied with the appropriate seals.

Series 3F

► FEATURES

- • **Connection system:** pushing the male coupling
- • **Disconnection system:** pulling back the sleeve
- • **Shut-off system:** flat valve
- • **Connectability:** female part under pressure male part free to drain
- • **Disconnection under pressure:** not allowed
- • **Interchangeability:** according to ISO 16028 and HTMA standard

- ★ • Quick-release couplings female part with split internal slider hydraulically balanced
- ▲ • Connection up to maximum working pressure is achievable with minimal effort (standard male couplings FFI-2FFI)
- ◆ • Sleeve with black zinc treatment

(▲) With FFI male couplings equivalent sizes (see at page 16)

Pressure drop graph: test bench to ISO 7241-2 specifications with ISO VG 32 oil temperature at 40°C (104°F).

Materials:

- High grade carbon steel, induction hardened.
- Valves in steel.
- Surface treatment: zinc plating and Cr III passivation.
- Springs in AISI and C98 steel.
- High resistance balls 100 C6.

Seals:

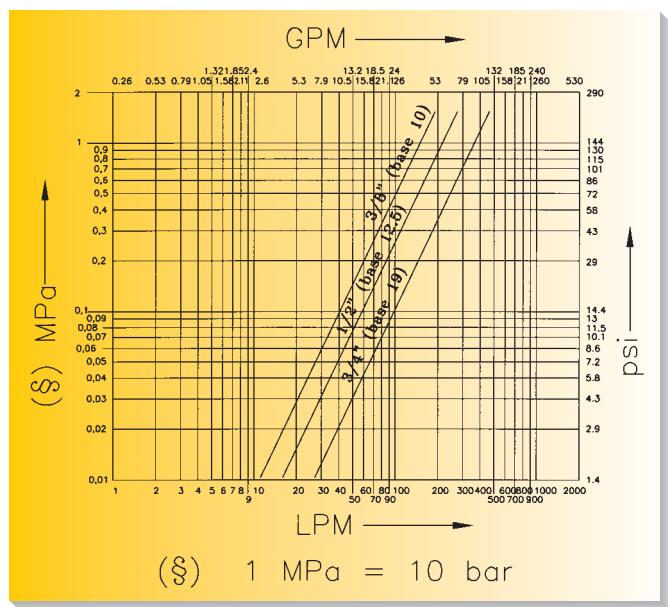

Standard in oilproof NBR (Nitrile Rubber) and Polyurethane.
On request: Viton, Neoprene, EPDM or other seals.

Antextrusion rings:

In pure PTFE.

Working temperatures:

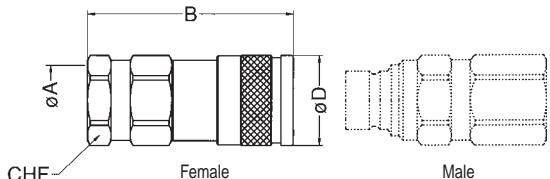

with standard seals from -25°C (-13°F) to +100°C (+212°F).
For different temperature, the quick-release coupling will be supplied with the appropriate seals.

The descriptions and illustrations in this catalogue are for information only and not binding.

see page 35

► FEATURES

- • **Connection system:** pushing the male coupling
- • **Disconnection system:** pulling the male coupling
- • **Shut-off system:** flat valve
- • **Connectability:** both male and female couplings under pressure
- • **Disconnection under pressure:** pulling the male coupling (single step)
- • **Interchangeability:** according to ISO 16028 standards
- • Connectable and disconnectable under pressure with every male coupling according to ISO 16028 standards
- • Complying with ISO 17567 standards for Power Beyond systems on agriculture machines
- • Pressure unbalance ratio 2.5:1
- • Suitable for rigid tubes and distributors
- • Breakaway feature
- • Backward internal valve for clean oil drainage
- • Internal mechanical block patented

► Power Beyond System

Faster has recently developed a complete range for flat face quick-release couplings purposely designed for Agricultural applications with Power Beyond system complying with ISO 17567 standards. These quick-release couplings (FPI and 5FPI series) have been designed to be installed on this kind of agricultural machines (equipped of additional remote hydraulic systems) and are interchangeable according to ISO 16028 standards.

► FEATURES

- **Connection system:** pushing the male coupling
 - **Disconnection system:** pulling back the sleeve
 - **Shut-off system:** flat valve
 - **Connectability:** both male and female couplings under pressure 3FFI series
 - **Disconnection under pressure:** in two steps
 - **Interchangeability:** according to ISO 16028 standard
- Connection and disconnection up to maximum working pressure are achievable with minimal effort
 - Equipped with two 1/2" size couplings, male and female parts
 - Drain line in the middle by 3/8" size male coupling

Pressure drop graph: test bench to ISO 7241-2 specifications with ISO VG 32 oil temperature at 40°C (104°F).

Materials:

- Female in steel with carbonitrited wear parts.
- Male in high grade carbon steel, induction hardened.
- Valves in steel.
- Surface treatment: zinc plating and Cr III passivation.
- Springs in AISI and C98 steel.
- High resistance balls 100 C6.

Seals:

Standard in oilproof NBR (Nitrile Rubber) and Polyurethane. On request: Viton, Neoprene, EPDM or other seals.

Antiextrusion rings:

In pure PTFE.

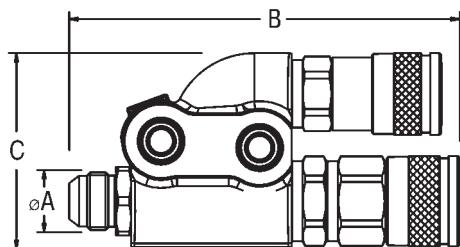

Working temperatures:

with standard seals from -25°C (-13°F) to +100°C (+212°F). For different temperature, the quick-release coupling will be supplied with the appropriate seals.

► FEATURES

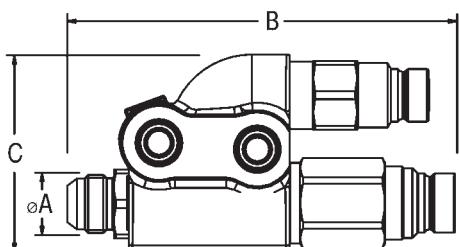

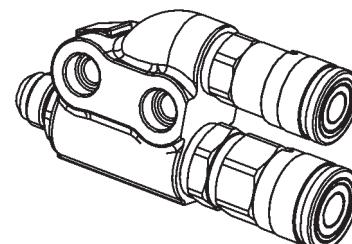

Cast iron manifolds BM series are equipped with two quick-release flat-face couplings 1/2" and 5/8" size, 2FFI-FFI series, male and female part. Both lines are in communication, allowing the use of implements at medium and big flowrates. Blocks are provided of fixing holes to firmly fix the manifolds to the machine.

► Spare parts kit

When seals are damaged due to wear or foreign material, it is necessary to replace them.

Original FASTER® spare parts kit are available.

Detailed instructions are included to achieve the correct replacement of damaged parts.

No special tools are required to carry out replacement.

For seal changing do not use sharpened tools that could damage the new seals or the coupling itself.

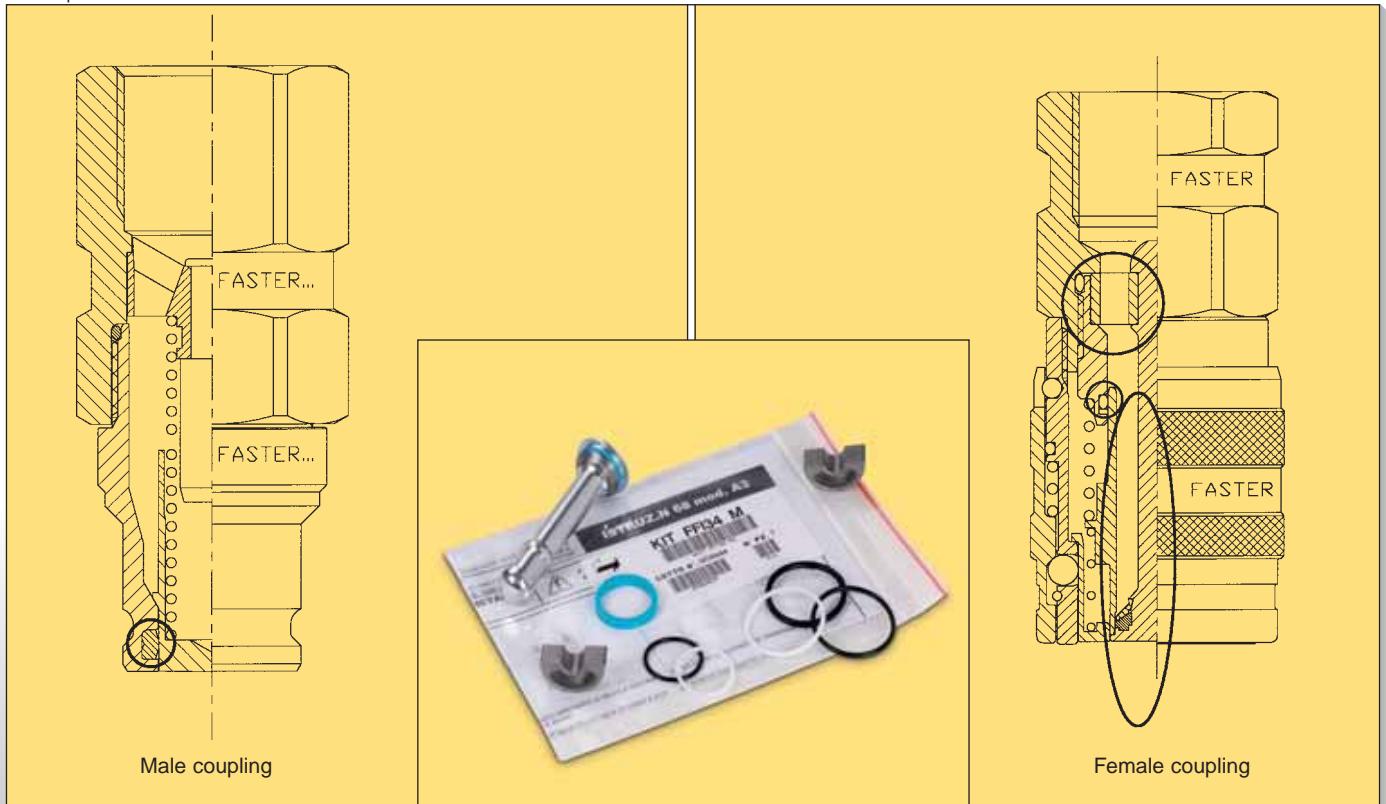

A tool kit for seals replacement is available

with code KIT UT2PO.

► Automatic dust tap

Self closing dust cap is made out of Acetal Resin and assures the protection of the female when disconnected.
The shield stays open during the connection phase and it closes by a push down motion when the coupling is disconnected.
They are available in different colours and on request it is possible to personalize them with a specific logo.

► Manual dust covers

Dust covers are very important accessories to guarantee the proper function and life of the product.
They are available in oilproof PVC which can withstand sudden changes of temperatures without loosing original characteristics.
For very high temperatures or heavy applications they are available in aluminium with plated brass chain and steel ring.

► FPQ Treatment (FASTER® Premier Quality)

All FF... couplings, on request, can be supplied with the revolutionary and exclusive FPQ (FASTER® Premier Quality) surface protection. Such a treatment adds to the technical characteristics of standard series couplings a corrosion resistance 3 times a standard zinc plating and Cr III passivation. Contact **Faster Research & Development Dept.** for ordering items of specify FPQ.

► FEATURES

One of the most critical aspects when using quick-release couplings is the never ending presence of dust and dirt.

This can make the operation of connection and disconnection very difficult and eventually cause oxidation that make the internal components lock up.

Fastercleaner® is the ideal product to loosen, lubricate and protect the quick-release couplings contaminated by dirt, earth and sand.

In a few seconds the internal components unjam with the benefit to regenerate completely the coupling performance.

Thanks to the **propellant mixture 134A**, this product is **completely ecological**, is 100% compatible with Nitrile Rubber (NBR), Viton® and Polyurethane seals used on FASTER® couplings.

► Built-in flat-face quick-release couplings for multiconnections

Built-in flat-face quick-release couplings are supplied on request and can be mounted on panels and housing specifically designed according to the customer's specification.

They are particularly suitable for machine tool and plastic moulding based on the fluid used and a wide range of threads.

For more specific technical information please contact

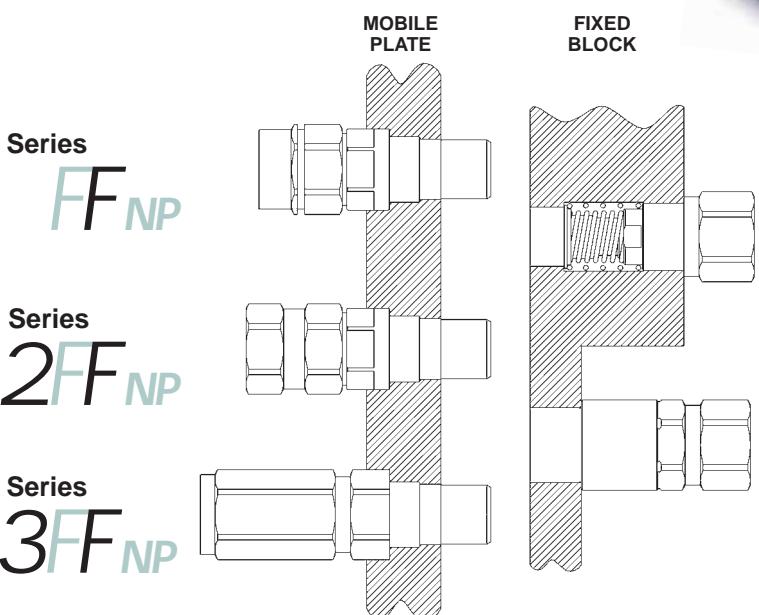

Faster Research & Development.

- 2FFNB: female couplings to be assembled in the block
- 2FFNC: female couplings to be assembled through a compact panel (low thickness)
- 2FFNP: male couplings with double valve
- 3FFNP: male couplings connectable under pressure

- Quick-release coupling block for automatic connection of several hydraulic electrical and pneumatic lines.

The **MULTIFASTER** is a **PATENTED** multiple connection system which allows simultaneous automatic connection of several hydraulic, electrical and pneumatic lines. The connection is simply achieved without any auxiliary tools even at maximum working pressure. Flat-face couplings used in the **MULTIFASTER** eliminate oil spillage during disconnection and air inclusion during connection. The fixed part of the **MULTIFASTER** is completely flat in order to facilitate cleaning. The **MULTIFASTER** can also be equipped with electrical and pneumatic connections.

For further information and technical details please ask for the specific catalogue.

CAT. 0111-GB

MULTIFASTER SERIES

► THE NEW REVOLUTIONARY WAY OF THE QUICK-RELEASE COUPLING

- **PATENTED** system for simultaneous connection of several hydraulic, electrical and pneumatic lines.
- Eliminates the risk of lines inversion.
- Special seals made in Polyurethane against extrusion and wear.
- Safety locking device avoids accidental disconnection.
- Protective dust cap.
- Surface on fixed block completely flat: easy to be cleaned.
- Connectable and disconnectable under pressure.
- **3P MULTIFASTER series** for an effortless connection under working pressure.
- Ecological: no spillage.
- Wide range of threads.
- Easy to be mounted also on pre-existent systems.

► THE NEW REVOLUTIONARY WAY OF THE QUICK-RELEASE COUPLING

- 1) Connectable with male and female parts under maximum working pressure.
- 2) Great robustness of internal components hydraulically stressed.
- 3) Flat-face design to avoid dirt contamination.
- 4) Completely covered threads to avoid accidental damages.
- 5) **FPQ FASTER® Premier Quality** high protection against corrosion (see at page 40).
- 6) Soft Nylon protective covers (PRO series) and aluminium protections are available to ensure a higher resistance to atmospheric agents (see at page 49).

► Protective covers

FASTER® protective covers have been especially designed in order to protect quick-release couplings from dirt contamination and atmospheric agents. The new special PRO T protection completely covers the coupling when the environment is particularly dusty or weather conditions can damage some components.

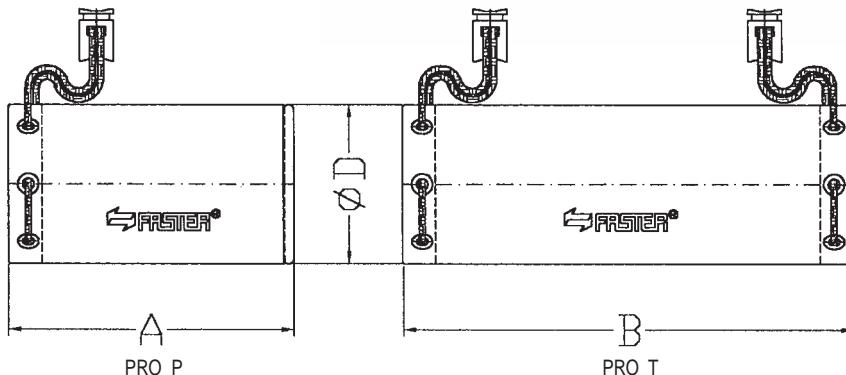

When the coupling is disconnected it is possible to glide the PRO T cover along the hose and protect only one part simply by closing the cover with the special string. The PRO P cover is used to protect the single parts of the disconnected coupling,
